**DETAILED ACTION**

This is the first action on the merits for application 10/594,989. By the preliminary amendment submitted 9/29/2006, claims 1 and 3-11 are currently pending in this application.

***Priority***

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. PCT/JP05/00208, filed on 1/12/2005.

***Information Disclosure Statement***

The information disclosure statements (IDS) submitted on 9/26/2006 and 12/10/2008 have been considered by the examiner.

The listing of references in the specification, see paragraph [0003], is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

***Allowable Subject Matter***

Claims 1 and 3-11 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or render obvious a rotary member mounting structure comprising a rotary shaft including a larger diameter portion with a first installation groove and a smaller diameter portion with a second installation groove; a first slide preventing member installed in a first installation groove to prevent a first rotary member from sliding axially toward a second rotary member and to prevent the second rotary member from sliding axially toward the first rotary member; and a second slide preventing member installed in a second installation groove to prevent the second rotary member from sliding axially in a direction away from the first rotary member, in combination with the other elements required by independent claim 1.

Document JP 62-68026 U discloses a rotary member mounting structure having two rotary members supported on a shaft of *constant* diameter and two slide preventing members. Document DE 7213391 discloses a rotary member mounting structure having a first rotary member supported on a smaller diameter portion of a shaft and a second rotary member meshed with a rotation preventing member on a larger diameter portion of the shaft but not supported on the shaft. One of ordinary skill in the art would not be able to combine the disclosures of JP 62-68026 U and DE 7213391 to arrive at the claimed rotary member mounting structure, since DE 7213391 does not disclose supporting two rotary members on the rotary shaft. Furthermore, even if a combination of JP 62-68026 U and DE 7213391 would produce the claimed rotary member mounting structure, such a combination would amount to a hindsight reconstruction of applicant's claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- FUJIU et al. (US 5,640,884) discloses a rotary member mounting structure with two installation grooves, a spline and two diameter portions (see Fig. 13A);
- SCHULZ et al. (US 2005/0254890 A1) discloses a rotary member mounting structure (see Fig. 1);
- PARRISH et al. (US 5,718,151) discloses a rotary member mounting structure with a slide prevention member (see Fig. 2);
- JAMES et al. (US 3,066,000) discloses a rotary member mounting structure (see Fig. 3);
- AOTA et al. (US 6,428,236) discloses a rotary member mounting structure with a slide prevention member (see Fig. 1);
- BAYER et al. (US 5,716,156) discloses a rotary member mounting structure with a spline and two diameter portions (see Fig. 1); and

- BUTHE et al. (US 4,639,163) discloses a rotary member mounting structure with a spline and two diameter portions (see Fig. 1).
